

# HANZA MECHANICS SEINÄJOKI

HANZA Mechanics Seinäjoki is specialized in machining by chip removal and production optimization. Milling and turning are carried out by machining centers that fulfill all the modern requirements. Reliability and flexibility ensure long-term client relationships. We carry out our work in close collaboration with our clients. Cost-efficiency is at the heart of our operations, from planning and product development to prototypes and efficient production. In our immediate vicinity, we have partner companies offering raw materials and their pretreatment and surface treatments like painting, nitriding and hardenings.

## ✓ Robot machining cells (12 pcs)

Robotization allows us to manufacture one-off applications as per the client requirements.

## ✓ CNC Lathes (13 pcs)

Our CNC lathes allow us to prepare custom products or series of thousands of machining products with very flexible schedules.

## ✓ Bed type milling machines (3 pcs)

Bed type milling machines has been designed for extremely demanding machining. They can be adjusted to any client requirements both in terms of sizing as well as equipment.

## ✓ Vertical milling centers (6 pcs)

The vertical milling centers we use are particularly suitable for product development, allowing us to meet a wide range of different client requirements.

## ✓ Multitasking machines (10 pcs)

Multitasking machines allow efficient, process-based machining as well as fast and efficient chip removal by combining turning with 5 to 9 axis multitasking machining.

## ✓ Horizontal milling centers (6 pcs)

Our wide selection of horizontal milling centers will have a suitable edge for every production process and machining product.

## ✓ Saws (6 pcs)

## ✓ CMMs(3 pcs)

## ✓ Logistic center and warehouse
